

Sys_GetProcessID

Description

Gets the process ID's found for an exe name

Syntax

Sys_GetProcessID(sProcessExeName, bReturnAsArray, bMustExist) As Boolean

Parameters

sProcessExeName (Boolean)

Name of process to check

bReturnAsArray (Boolean)

Store result in gaValue

bMustExist (Boolean)

Process must exist

Return value

Result will be stored in gsValue. If specified result is stored in gaValue

Example

VBScript

```
If bStatus Then bStatus=Sys_GetProcessID("CapaInstaller.exe", True, False)
If bStatus And IsArray(gaValue) Then
  For index = LBound(gaValue) To UBound(gaValue)
    bStatus = Job_WriteLog("Custom", "Index #" & index & ": " & cStr(gaValue(index)), bStatus, True)
  Next
End If
```
