

Reg_UpdateExpandStringX64

Description

Adds value to an expandable string variable in 64 bit registry from a 32 bit context

Syntax

Reg_UpdateExpandStringX64(sHandle, sKey, sVariable, sValue, sSeperator) as Boolean

Parameters

sHandle (String)

HKEY-handle

sKey (String)

Subkey path

sVariable (String)

Name of variable to contain the value

sValue (String)

Value

sSeperator (String)

Seperator between substrings

Example

VBScript

```
If bStatus Then bStatus = Reg_UpdateExpandStringX64("HKLM", "Software\KeyName", "ValueName", "%dev%|%Test%",  
"|")
```
