

SQL Server Permission configuration for Setup Wizard

Introduction

This document will explain the required SQL Server permission for running a successful database install or update of Capalnstaller with the Setup Wizard.

You need one of the following permissions, to run a successful install or update of the Capalnstaller database.

Element	Description
Install new database	In order to create a new Capalnstaller database, you need one of the following server permissions. <i>dbcreator</i> , <i>Create any database</i> or <i>Alter any database</i> .
Upgrade database	The used login needs to be a member of the db_owner role or be granted the permission Control (GRANT CONTROL TO [user]).
Install in empty database	You can also install the Capalnstaller database in an already created empty database. In order to do this, the used login needs to be a member of the db_owner role.

Read more about permission on [Microsoft.com](https://www.microsoft.com).
