

Get Profiles

Description

This function is used to get all the profiles from the Default Management Point. The default point is set using [Set default management point function](#)

```
Public Function GetProfiles()
```

Return value

The function returns an array of profiles. Each profile in the array is a joined line with the character defined with [Set splitter](#).

- profile.ID
- profile.Name
- profile.Description
- profile.Priority
- profile.Version
- profile.CMPID
- profile.GUID

Example

VBScript

```
Set oCMS = CreateObject("CapaInstaller.SDK")
Set aList = CreateObject("System.Collections.ArrayList")

Wscript.echo oCMS.SetDatabaseSettings("ServerName", "CapaInstaller", False)
Wscript.echo oCMS.SetDefaultManagementPoint("2")

Set aList = oCMS.GetProfiles()
For Each item In aList
    arr=Split(item,"|")
    Wscript.echo "Profile: ID: " & arr(0) & ". Name: " & arr(1) & ". Description: " & arr(2) & ". Priority: "
    & arr(3) & ". Version: " & arr(4) & ". CMPID: " & arr(5) & ". GUID: " & arr(6)
Next
```
