

# Get update inventory for unit

## Description

Gets a list of update inventory for a specific unit.

## Syntax

```
GetUpdateInventoryForUnit(Byval UnitName as String, Byval UnitType as String) as ArrayList
```

## Parameters

*UnitName (String)*

Name or UUID of the unit to retrieve inventory for

*UnitType (String)*

Type of the unit

- "Computer"
- "User"

## Return value

The function returns an array of Update Inventory items. Each element (inv) in the array is a joined line with the character defined with [Set splitter](#).

- Qfename
- InstallDate
- Update.ID
- Update.Name
- Revision
- InstallCount
- Status

## Example

### VBScript

```
Set oCMS = CreateObject("CapaInstaller.SDK")
Set aUnit = CreateObject("System.Collections.ArrayList")
wscript.echo oCMS.SetDefaultManagementPoint("1")
Set aUnit = oCMS.GetUpdateInventoryForUnit("Klient", "User")
for each item in aUnit
    wscript.echo item
next
```
