

Deploy Simple Certificate Enrollment Service

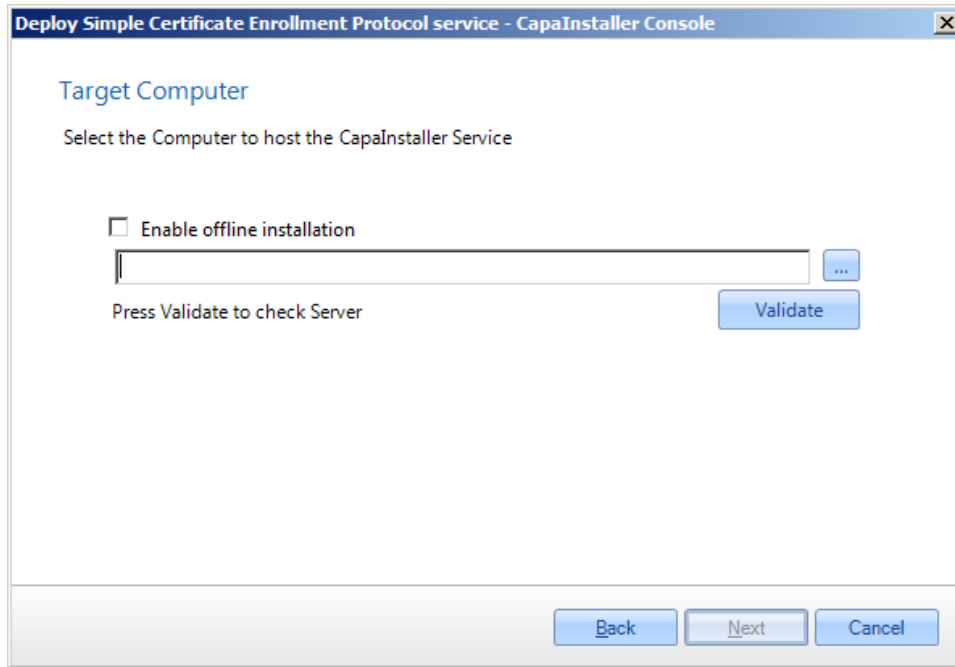

Introduction

This will guide you through the deployment of a Simple Certificate Enrollment Protocol (SCEP) Service.

Step	Action
1	<p>Open Services folder, and right click on SCEP Service click <i>Deploy Simple Certificate Enrollment Protocol Service</i> and the following form will open.</p> <p>Make sure that the required prerequisites are met. If they are not, you are able to click the status link to create the missing requirements.</p>
2	 <p>The screenshot shows a window titled "Deploy Simple Certificate Enrollment Protocol service - CapaInstaller Console". The main content area displays the text "Required prerequisite." above a table. The table has two columns: "Prerequisite" and "Status". One row is visible with the prerequisite "CapaInstaller Back-end Service" and a status of "Pending". Below the table, there is a summary line: "Status: Passed: 0. Failed: 0. Warning: 0. Skipped: 0." and a "Re-Run" button. At the bottom of the window, there are four navigation buttons: "Back", "Commit", "Next", and "Cancel".</p>

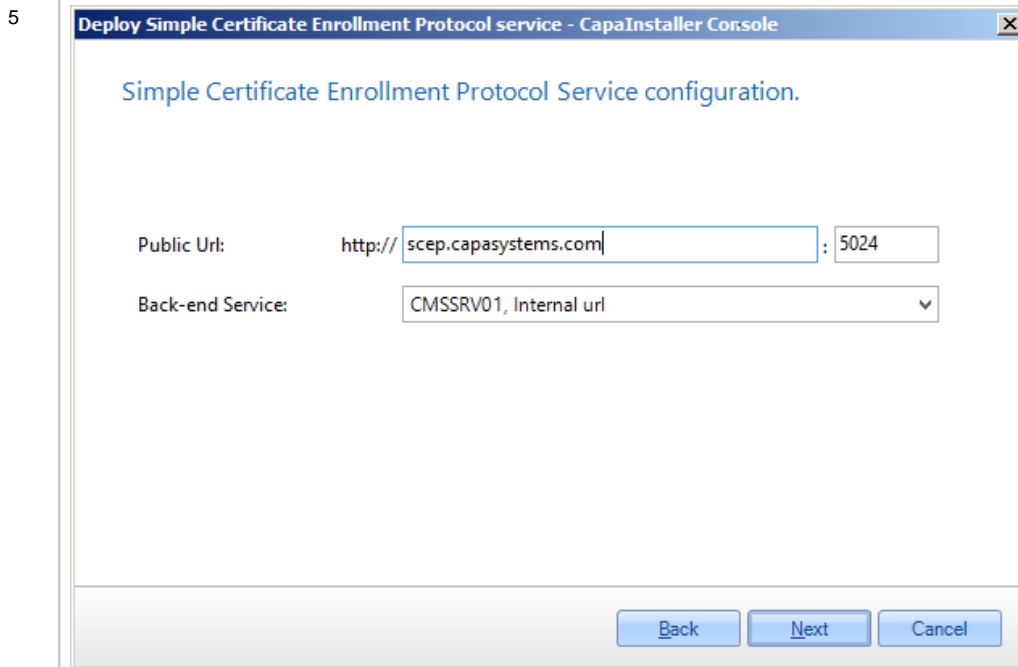

2 Enter the name of the Server and press Validate

Choose *Enable offline installation* if the server cannot be contacted because of firewall's etc.

3 If the server to which you want to deploy the SCEP service can't be reached through WMI, then you must enable "Enable offline installation"

4 Assign a Public Url, port and Back-end service to the service.

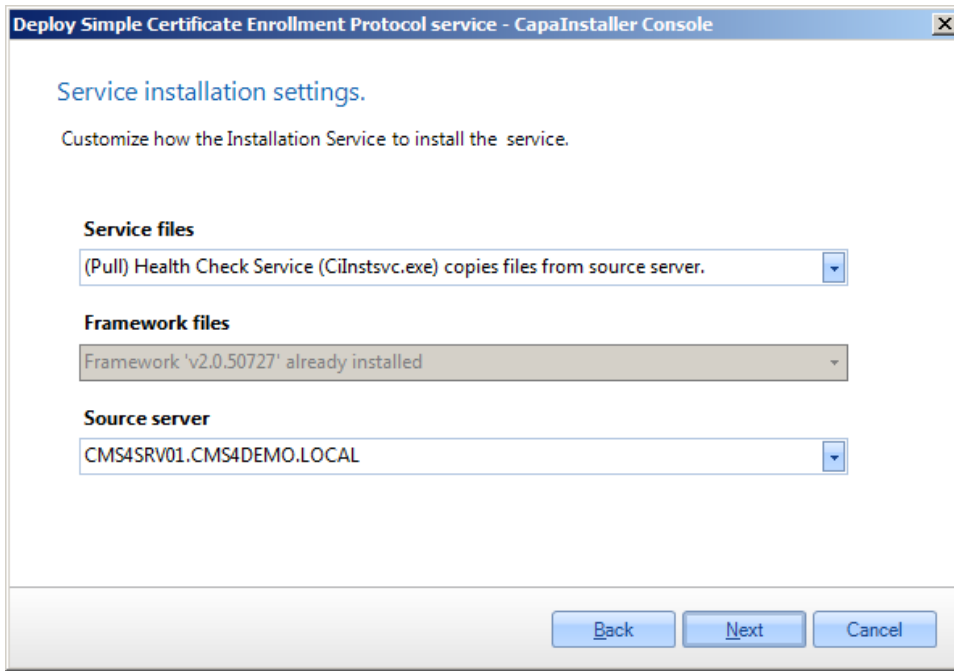

6 If you have enabled Offline installation this guide proceeds at step 20: [Offline installation](#)

7 **Online installation**

- Select how service files are copied to target Server
- Select how framework files are copied to target Server - Select the source server

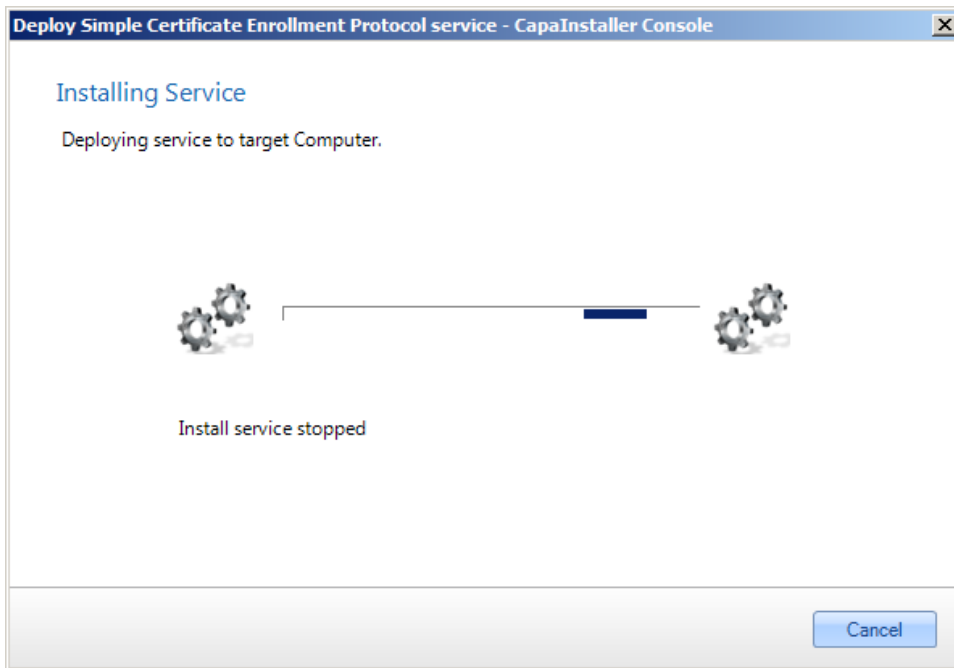

8

9

The Service is being installed.

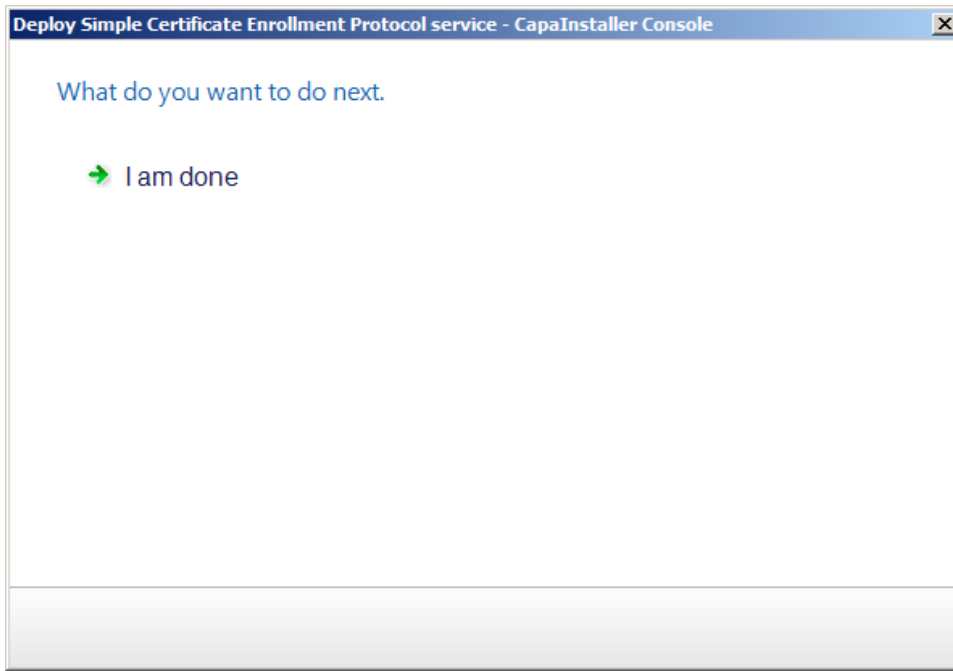

10

11

Installation completed.

12

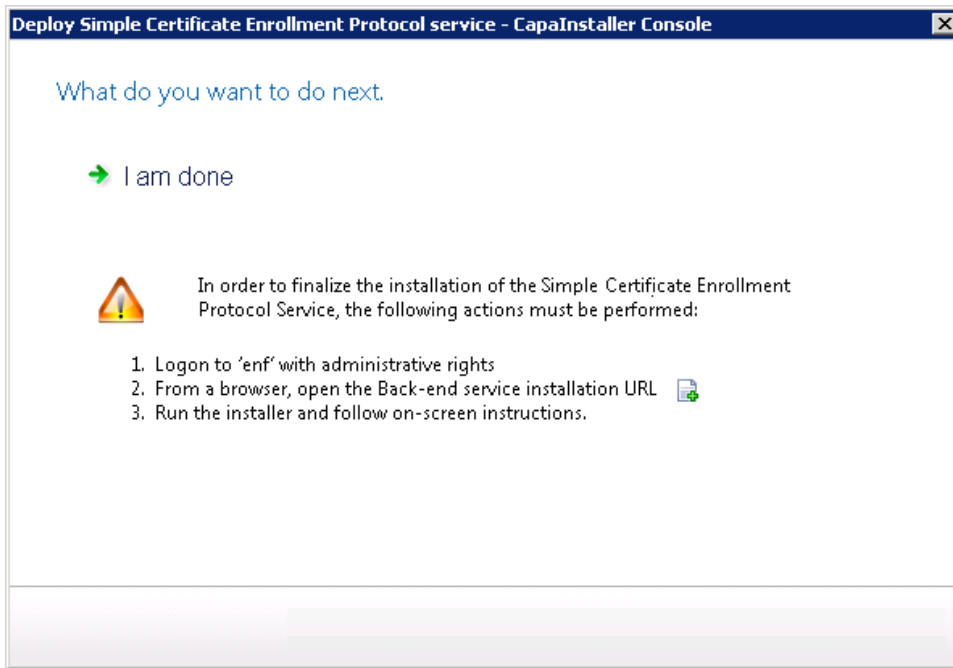

13 Online installation end

20 Offline installation

21 Configuration completed, press the URL icon to copy the install URL to the clipboard

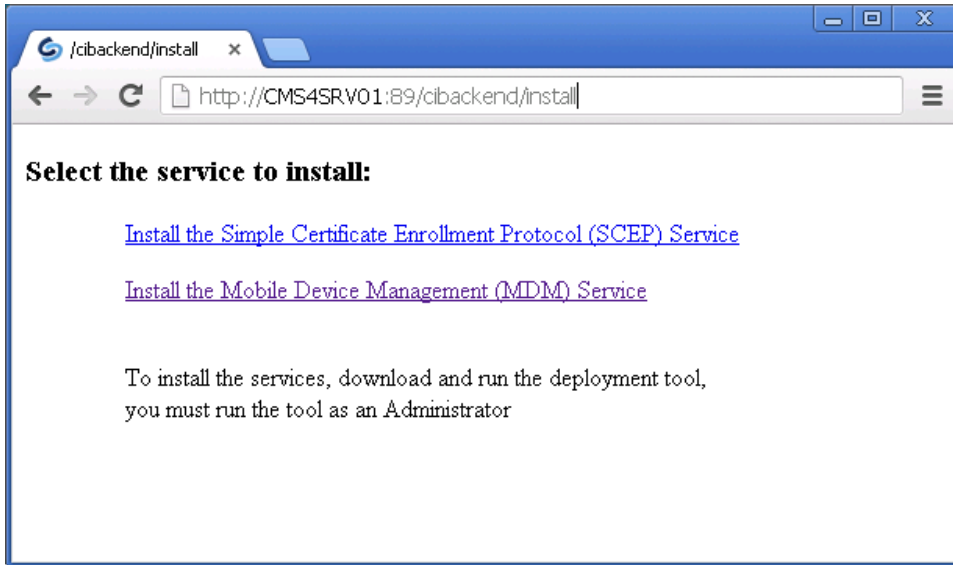

22

23 Now log in as administrator on the target server on which the SCEP service will be deployed

24 Open a browser

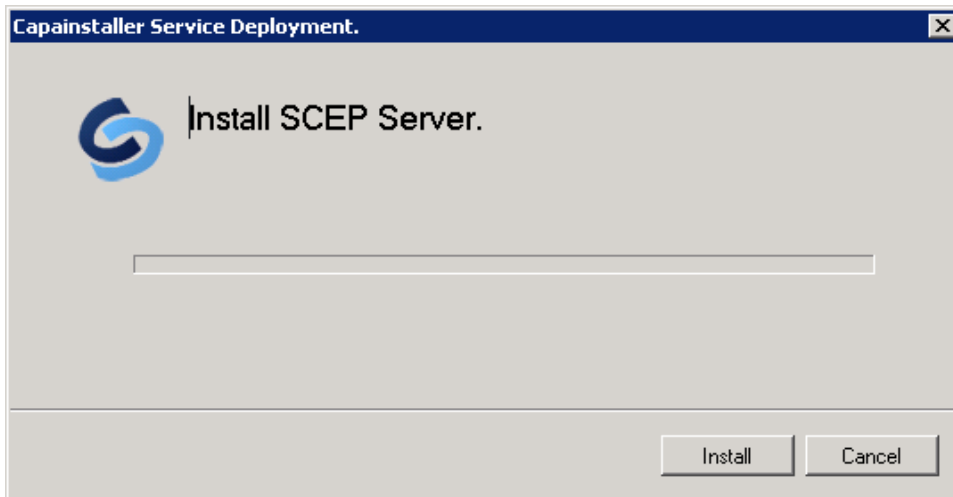

25 Paste in the URL link from the clipboard. The URL link is the backend service URL followed by "/install" like this "http://CMS4SRV01:XX/cibackend/install"

26 Click the "Install the Simple Certificate Enrollment Protocol (SCEP) Service"

27 The Scep installer executable file will be downloaded.
Execute the SCEP installer file.

28 Press the "Install" button

29 SCEP installation finished
