

# Net\_MapNetworkDrive

## Description

Maps a network drive. Can disconnect if an existing drive is mapped. Use Domain\UserName if you wish to map a drive using another User. Using \* as password, the CapalInstaller reads and decrypts the password if it has been encrypted using CapalInstaller. See more about the password encryption feature [here](#)

## Syntax

Net\_MapNetworkDrive(sDrive, sServerShare, bDisconnectExisting, sUserName, sPassword) As Boolean

## Parameters

*sDrive (String)*

Drive letter to map

*sServerShare (String)*

UNC path to map

*bDisconnectExisting (Boolean)*

Disconnect existing device if already mapped

*sUserName (String)*

Username. Use if you must connect with another user

*sPassword (String)*

Password for the user. Use \* if the password is encrypted by CapalInstaller in registry

## Example

### VBScript

```
If bStatus Then bStatus = Net_MapNetworkDrive("Q:", "\\CAPAINSTALLER\PRINTERSHARE", True, "", "")
```
